	Date	Member	Sprint	What you did yesterday	What you are going to do today?	Challenges/Roadblocks	Notes
Sprint 1 Meeting 1	10/27/2024	Adarsh	1		connect to the database		
		Jaden	1		Login validation GUI and backend		set up with api
		Grace	1		set up GUI for customer view		
		Daniel	1		set up GUI for customer view		
		Abel	1		employee backend		
							GitHub release is due Tuesday. This was the first meeting for everything. No challenges yet. Nothing done previously.
							Things to do for github release
							connect some backend to the front for the customer view - edit database from the fronend, change inventory
							commment code
							add minutes document to github
							4 sprint backlog tasks
							get photos for the menu buttons
							fix sprints, backlog, and tasks in jira
Sprint 1 Meeting 2	10/28/2024	Adarsh	1	Familiarized with tech stack (Express.js, node.js, etc.) Created initial project structure	Create GitHub branches for front end & back end.	Displaying images in the GUI	
		Jaden	1	Implemented home page	Make login GUI	Displaying images in the GUI	
		Grace	1	Sprint 1 project planning	Create Customer GUI	None	
		Abel	1	Sprint 1 project planning	Implement Login backend logic	File organization	
		Daniel	1	Sprint 1 project planning	Begin implementing customer order logic	Running the code locally	
Sprint 1 Meeting 3	10/29/2024	Adarsh	1	Created GitHub project structure. Created starter code	Enhance customer gui design	File structure got messed up which caused difficulty running code.	
		Jaden	1	Started work on login GUI	Commenting front end code and completing login GUI	Linking button listeners to back-end code	
		Grace	1	Started work on Customer GUI	Completing basic Customer GUI	None	
		Abel	1	Started work on login and database connection logic	Completing login verification	None	
		Daniel	1	Familiarized with tech stack (Express.js, node.js, etc.)	Implemented basic customer GUI logic	Testing back-end code effectively	
Sprint 1 Meeting 4	11/4/2024	Adarsh	1	Deloyed the Project	set up api calls for weather	weather gives houston location, not college station	
		Jaden	1	Finished the login GUI	Implement the employee manager GUI view	stay focused	
		Grace	1	Finished the customer GUI	add items to the cart, set up payment option for customer, implement a delete button	learning how to use react	

	Date	Member	Sprint	What you did yesterday	What you are going to do today?	Challenges/Roadblocks	Notes
		Abel	1	connected the backend for employee login	employee backend connection to the database for real time edits	Member is unavailable due to unforseen illness	
		Daniel	1	presentation and document structure organized and designed	connect the backend to the frontend for real time editting and add more documentation and presentation notes	balancing schoolwork and other priorities	
Sprint 2 Meeting 5	11/11/2024	Adarsh	2	fixed github	fixing github and weather api	everything is breaking	
		Jaden	2	made the front end of inventory/manager view	front end of employee management	merging conflicts	
		Grace	2	implement simple, basic functionality of checkout/add to cart	format the reciept and checkout page	i do not know how to use react	
		Abel	2	made progress of employee backend	finish employee backend	breaking when it was running	
		Daniel	2	completed document struture and design for rest of the project	get customer order backend working for checkout	scheduling and other classes	
Sprint 2 Meeting 6	11/18/2024	Adarsh	2	weather api, front end for employee management	report generation		
		Jaden	2				
		Grace	2	set up the front end for the cashier view, formatted the cart layout	set up a payment option for the customer, format the cart in the customer view	time and priorities	
		Abel	2	set up back end functionality for employee management and inventory	finish up inventory back end functionality	getting everything to talk and link together	
		Daniel	2	implement most of functionality for submitting orders	finish the implementation for submitting orders		
Sprint 3 Meeting 7	11/20/2024	Adarsh	3	implement the translation service of the whole website	voice to text implementation for accessible access	lack of knowledge, time, stress	
		Jaden	3	menu editting and price editting on the manager side	login authenticification	linking front and back end together	
		Grace	3	updating prices from the backend to the frontend, impelement the zoom controls	format the zooming for a consistent layout, help abel with chatbox implementation	time, other classes	
		Abel	3	reports for the manager view	chatbox implementation	linking	
		Daniel	3	getting order submission updates	getting the updates to fully implement	getting backend to link	

	Date	Member	Sprint	What you did yesterday	What you are going to do today?	Challenges/Roadblocks	Notes
Sprint 3 Meeting 8	11/22/2024	Adarsh	3	started on the voice to text implementation, testing various apis to determine the most efficient and successful one	continue working on the voice to text implementation	lack of knowledge, stress	
		Jaden	3	built the login authentification with a google api	help teammates with the voice to text and chatbox implementation	lack of knowledge	
		Grace	3	formatted the zooming for a consistent look, started the chatbox feature with research on how to start	continue implementing the chatbox	lack of knowledge, time	
		Abel	3	started research on chatbox implementation, looking into apis and different resources and methods of implementation	continue implementing the chatbox	lack of knowledge	
		Daniel	3	all orders can submit and be full functional in the backend	work with adarash to implement the voice to text	other classes and work
